

Angular JS Course (Beginner)

Call 012 22 33 48 (English) / 015 543 333 (Khmer) to book!

\$150 per student

Course Dates / Times:

- Friday 25th September (6pm - 8pm)
- Saturday 26th September (9am - 4pm)
- Sunday 27th September (9am - 4pm)

Course Overview:

Angular JS Course for Beginners is aimed at developers who already have some understanding of HTML and JavaScript and are interested to take their web application development skills to the next level. Candidates for this course have heard about the power of Angular JS and are excited to learn more about it and gain some real experience!

Our experienced, international teachers will guide students through the journey of getting set up and running with their first Angular JS application. Students will learn about all the features of Angular JS such as two-way data binding, dependency injection, creating reusable components using directives and much, much more.

Prerequisite:

Students must already have some programming background, such as through school, basic training courses, or work experience - particularly with basic HTML and JavaScript.

NOTE: The course will be conducted in English.

Course Outline:

- Introduction to AngularJS
- \$compile, \$digest and \$apply Model Views
- Dependency Injection
- Modules
- Controllers and \$scope
- Routes with Controllers
- Views
- Directives
- Services
- The \$http Service
- Communicating with Controllers
- Translations in Angular JS
